Dear all valuable customers,

### ***How to Determine Volumetric Weight***

Shipping charge will be based on the volumetric weight of the shipment when the volumetric weight exceeds the actual weight.

#### ***Step 1:***

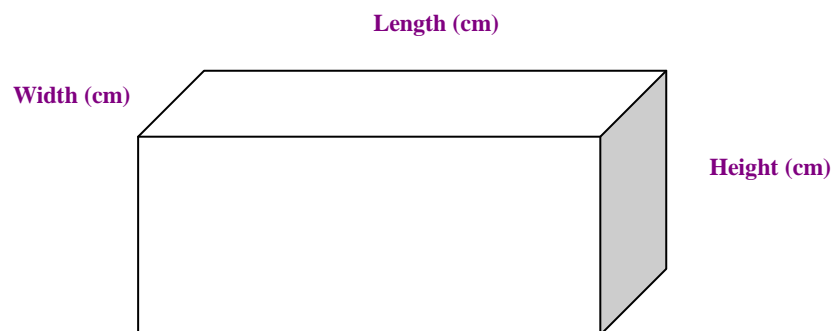

Calculate cubic size: Multiply the length by the width and by the height (each rounded up to the nearest whole centimeter) of each package.

#### ***Step 2:***

Determine the volumetric weight: Divide the cubic size of the package by 5,000 (in cm) / 305 (in inch) to determine the volumetric weight in kilograms. Increase fractions of a weight to the next full kilogram.

Multiple-piece shipment volumetric weight is the sum of all volumetric weight of all packages within the shipment.

Volumetric Weight (kg):  $L \times W \times H \text{ (in cm)} / 5000$   
 $L \times W \times H \text{ (in inch)} / 305$

Should you have any inquiry, please do not hesitate to contact your Account Manager or Customer Service Department at 852-2620 0289.
